Profile applicator kit for self-adhesive top & bottom profiles

This kit allows the application of nearly all current waterpanel, roof and side profiles. By changing the rolls and the sliding carriage the profile applicator is adapted to the different profile types. The distance of each profile to the edge of the windscreen can be adjusted, as well as the pressure of the profiles on the windscreen.

Note: Vehicle identification - see accessories!

Dimensions (LxWxH): 285 mm x 250 mm x 115 mm

Article number	Content	Item/unit
01069200	16	articles

Profile applicator for self-adhesive waterpanel profiles

- one tool for ten different profile cross sections
- precise application position - no gaps between glass edge and profile
- guarantees the recommended application pressure of 50 NM on full surface
- high assembly output per product cycle
- reduced assembly labour costs per windscreen
- reduced claim rate related to incorrect profile application (detaching problems)

Profile roll No. 9 for profile applicator

Roll for the application of side, roof and self-adhesive waterpanel profiles. Mounted on the bottom position of sliding carriage No. 22, this roll is used to apply side and roof profiles.

In the upper position of the pre-mounted sliding carriage of the profile applicator, it is used to apply self-adhesive waterpanel profiles.

Notes: This roll is **not** a sales item as it is already mounted on the profile applicator!

The reprinting, storage in a data processing system or transfer of this publication by electronic, mechanical, photographic or other methods or recording of the translation of this publication - including extracts - requires the prior written authorisation of the PMA/TOOLS AG. E&OE.

Self-adhesive bottom moulding procedure:

Clean silkprint with silkprint cleaner. Use PT 700 PLUS for standard silkprint cleaning (1).
Apply PT 725 PLUS glass-paint primer onto pre-cleaned surface. Let primer dry out as recommended (2).

Set up the profile applicator for self-adhesive bottom moulding application. Select the correct bottom wheel corresponding with bottom moulding cross section (3).
Adjust bottom wheel position with horizontal adjuster. Make sure that bottom wheel runs over the full profile surface. This guarantees best possible adhesion results (foamsplit) (4).

Adjust pressure with vertical spring adjuster. Recommended pressure is 50 Nm over the full surface (see red mark on spring for indication) (5).
After tool has been set up apply profile parallel to the glass (6).

Self-adhesive upper or 3-sided moulding procedure:

Follow step 1 (cleaning) and step 2 (priming) as described above.

Set up profile applicator tool for upper, side or 3-sided profile application. Change sliding carriage, top and bottom wheels. Use top wheels corresponding to the geometrical shape of the profile (3).
Adjust upper profile wheel with horizontal adjuster to ensure correct profile position on glass (4).

Fix sliding carriage with Allen key screws in a straight position. This ensures a precise and constant profile position (5).
For 3-sided mouldings start application by positioning the corners manually before using the tool. This guarantees a correct moulding position (6).

Adjust a smooth pressure of less than 20 Nm on the vertical adjuster spring (release spring pressure to suit) for top, side or 3-sided profile application to avoid any stretching (due to high pressure) during application. The softer the profile, the less pressure should be used (7).
Adjust stronger pressure of 20-30 Nm on the vertical adjuster spring and repeat the profile application. This guarantees highest possible adhesion of self-adhesive profile to the glass surface (8).
