

Be safe and
reduce the risk of back injury!

Today's modern windscreens are both larger and heavier and over-reaching when installing a new glass can contribute to muscular back pain.

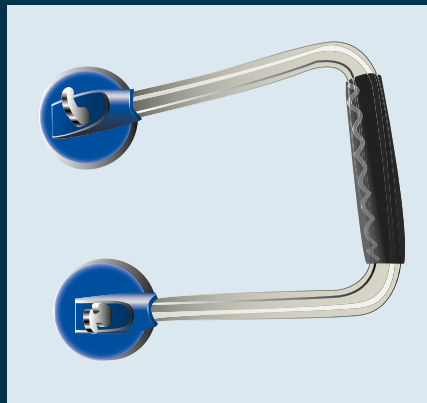

Our tip: To avoid back trouble when reaching over whilst installing a windscreen why not use our new **ERGO double suction lifter**, designed to provide the best ergonomic solution (Art. No. 04212913).

Anton W., Munich:

„The ERGO allows me to work with a totally different leverage. I can work in a much straighter position, which relieves my back considerably.“

Hermann G., Cologne:

„The ERGO can easily be employed when working with heavy windscreens. It feels like half the weight only.“

Characteristics:

- >> ergonomically designed long-handle suction lifter
- >> more efficient windscreen installation by helping to shift the body's centre of gravity
- >> greater handling providing better control of your work
- >> minimises the risk of stress to the back muscles through ergonomical way of working
- >> non-slip handle for increased safety
- >> can be used for car, truck and bus screens
- >> ideal for use in conjunction with one-person lifters
- >> load capacity: 40 kg, 'Made in Germany'
